CAREER OBJECTIVE

Junior Penetration Tester with hands-on experience in web application security, network troubleshooting, firewall deployment, and vulnerability assessment. Completed 40+ hands-on labs on PortSwigger Web Security Academy and developed an offensive-security graduation project. Seeking an entry-level Penetration Tester or Security Tester role to apply practical skills in web and network security while continuing to develop expertise in Active Directory and enterprise security testing.

TECHNICAL SKILLS

Web Application Security: OWASP Top 10 fundamentals, Vulnerability Assessment, Authentication attacks, Access Control/IDOR, File Upload exploitation, Path Traversal (40 hands-on labs, PortSwigger Web Security Academy)

Network Security: Firewall deployment & configuration (FortiGate), network troubleshooting, static/dynamic IP diagnostics, structured cabling

Automation & Scripting: Python (security automation), Bash scripting

Tools & Platforms: Burp Suite, Nmap, Metasploit, Wireshark, Kali Linux, Windows/Linux OS configuration, TryHackMe, PortSwigger Academy

EXPERIENCE

Network Engineer — Taramatic

Summers 2024, 2025 & 2026 (seasonal)

Progressed from Network Technician to Network Engineer

- Installed and configured structured network cabling, equipment racks, and a CCTV system at a client site, delivering a fully operational network infrastructure.
- Diagnosed and resolved a static-IP connectivity outage caused by a router replacement: connected a personal lab to the affected storage device, ran a network scan to identify the correct IP address, and restored the router's original IP range — recovering connectivity for every static-IP device on the network without any downtime for end users.
- Owned technical documentation for the site, producing configuration reports and organizing files so that any team member could pick up a document and immediately understand device setup and network layout — a key factor in the promotion to Network Engineer.

Field Network Security Engineer — FortiGate Firewall Deployment Project

Summer 2025

- Deployed and configured FortiGate firewalls across 20 sites spanning 3 governorates over an 11-day rollout (4, 2, and 5 days per governorate respectively).
- Led the technical execution as the primary engineer within a 2-person field team, ensuring consistent firewall configuration and successful go-live at every site.

PROJECTS

Silent Scraper Academy — Second-Year Graduation Project

- Designed and implemented a vulnerable web application lab (PHP apps hosted via XAMPP) within a full-stack cybersecurity training platform, enabling users to safely practice exploiting real-world vulnerabilities in an isolated environment.
- Platform built with Node.js, Python (FastAPI), and HTML/CSS/JavaScript, including subdomain enumeration and reconnaissance tooling.
- Project details: [LinkedIn post](#)

HackX CTF Competition

March 2026

- Ranked #40 out of 280 competitors, solving 93 challenges and scoring 17,010 points.

TryHackMe — Practical Penetration Testing Training

Ongoing

- Completed 95 rooms and earned 14 badges, ranking in the top 6% of all TryHackMe users.
- Completed the Junior Penetration Tester and Cybersecurity 101/Pre-Security learning paths.

PortSwigger Web Security Academy

Ongoing

- Completed 40 hands-on labs across four modules: Authentication (14), Access Control (13), File Upload Vulnerabilities (7), and Path Traversal (6).

EDUCATION

B.Sc. in Cybersecurity — Helwan International Technological University (HITU)

Expected 2027

Relevant Courses: Networking Fundamentals, Operating Systems, Information Security

PROFESSIONAL TRAINING PROGRAMS

Digital Egypt Pioneers Initiative (DEPI)

Jul 2026 – Dec 2026 (ongoing)

Track: Infrastructure & Security — Vulnerability Analyst and Penetration Tester

- Enrolled in an intensive 6-month, government-backed technical training program combining infrastructure security, penetration testing, professional soft skills, and freelance career readiness.

Cybersecurity Summer Camp (120 hours)

Jul – Aug 2026

- Completed 120 hours of hands-on training covering networking fundamentals, cybersecurity principles, and ethical hacking.

CERTIFICATIONS

Cybersecurity: Junior Penetration Tester (TryHackMe) • Cybersecurity Essentials (Cisco/MCIT) • Cybersecurity 101 & Pre-Security (TryHackMe) • Cybersecurity Fundamentals (Edraak) • Cybersecurity for Beginners (Maharah-Tech)

Programming & IT: Introduction to Python (Cisco) • Computer Hardware Basics (Cisco) • Microsoft Office Specialist – MOS (Edraak) • ICDL (Edraak)

Languages: Arabic (Native) • English (Professional Working Proficiency)
